EYEGARD®

Non-woven Adhesive Eye Dressing with pad

Description:

A surgical eye dressing is a sterile, single-use medical device designed to protect and support the eye following surgery, injury, or other ocular conditions. This particular product features an adhesive border, ensuring secure adherence to the skin around the eye without the need for additional tape or bandages.

Uses:

- Post-Surgical Care: Protects the eye after procedures such as cataract surgery, corneal transplants, or eyelid repair.
- Eye Injuries: Covers wounds, abrasions, or foreign objects in the eye.
- Corneal Ulcers: Shields the eye from further damage and promotes healing.
- Dry Eye Syndrome: Helps retain moisture and prevents excessive evaporation.
- Eye Infections: Protects the eye from external irritants and pathogens.
- Other Ocular Conditions: Can be used to treat a variety of eye conditions as directed by A healthcare Professional.

Sizes

Sr. No.	Dressing Size
