SURGICAL GOWN

ABOUT US

MAKING IN INDIA SINCE 2002

Established in India at the turn of the century to serve the medical industry as a backbone for all its infection prevention requirements, we have now grown into a multinational business with an extensive portfolio of protective solutions. The teams of experts at our advanced R&D centre go above and beyond to identify the pain points of our customers and develop products that add value.

Our globally trusted products are manufactured in our state-of-the-art facility equipped with a 100k clean room to ensure the highest protection for our customers' customers. We have put in place stringent quality control mechanisms at our in-house testing lab to address the demanding challenges in the surgical room.

Compliance to global standards inspires trust and engenders reliability

- Full proof of sterile packaging and contents
- In-house fully validated EO sterilization conforming to ISO 11135
- Our quality process comply with EN ISO 13485:2012
- We rigorously implement EN 13795, AAMI PB 70 and ASTM 1671 standards
- To assure traceability and logistics control we implement EAN bar coding
- Each product carries CE label in accordance with European Medical Directives 93/42/EEC, amended by 2007/47/EC
- Each product comes with sterility maintenance dust covers for extended protection and enhanced shelf life
- We use fully validated peel open packaging process conforming to ISO 11607

Our Raw Material Partner

AHLSTROM

Designed to maximise patient care and protect theatre staff

Specialists in surgical gown drapes and packs, we offer the widest range of disposable or wear.

Our range comprises non-woven single use surgical drapes, gowns, infection prevention products and sterile barrier systems.

End to end manufacturing facilities and a team of quality engineers dedicated to turning out high quality, high protection and comfortable or wear gives us an edge in this segment. What you get when you use our products is extreme protection and superior comfort.

Our range of fabrics includes composite non-wovens, breathable viral barrier products and smms.

SMMMS Fabric

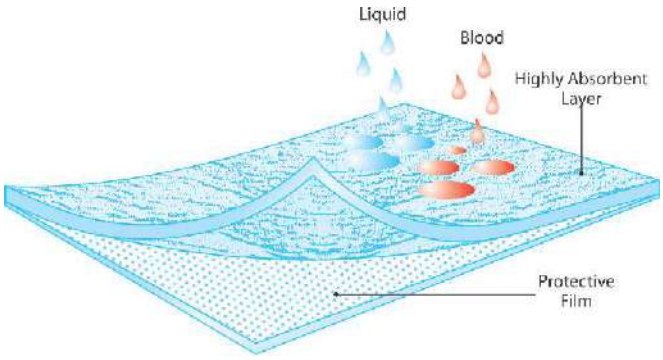

This high tech fabric comprises of a total of five layers in which three middle layers are melt blown fabrics and two external covers on either side are spun bonded fabrics. The combination results in high tensile strength, superior filtration and extreme pliability resulting in comfort and ease of movement. SMMMS is ideal for or gowns and drapes and for use as sterilization wraps. The composite fabric possesses superior properties when it comes to isolating dust particles, alcohol, blood, bacteria and viruses.

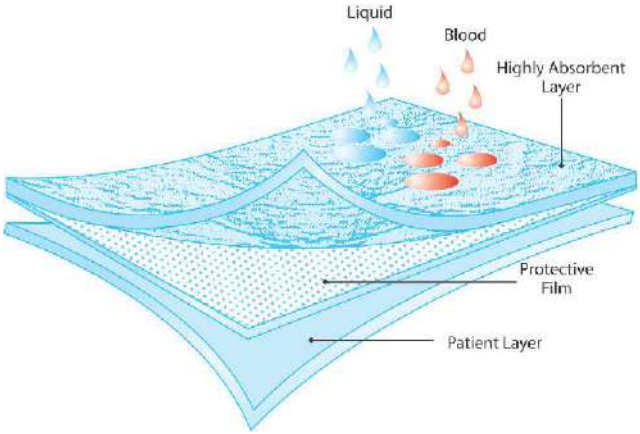

Application:- manufacturing of Gown, Drapes & Equipment Covers

Dual Laminate Fabric

Dual Laminate Fabric is produced by using polythene film bonded to a layer of highly absorbent dry laid non-woven fabric. It has superior strength and is ideal for use as drapes and for reinforcement zones. It is also recommended for use as covers for expensive medical equipments.

Application:- manufacturing of Gown & Drapes

Trilaminate Fabric

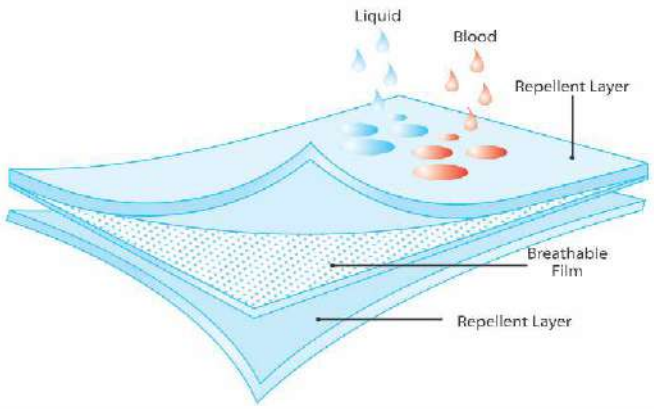

Trilaminate fabric is composed of a top layer of drylaid non-woven highly absorbent fabric, a polythene film middle layer and a bottom layer of spunbonded polypropylene delivering flexibility, strength and protection as barrier against pathogens and liquids. Manufactured to highest quality standards using the finest raw materials and processes, trilaminate fabric exceeds EN13795 standards recommended for drapes and gowns. This fabric is ideal for Level IV drapes.

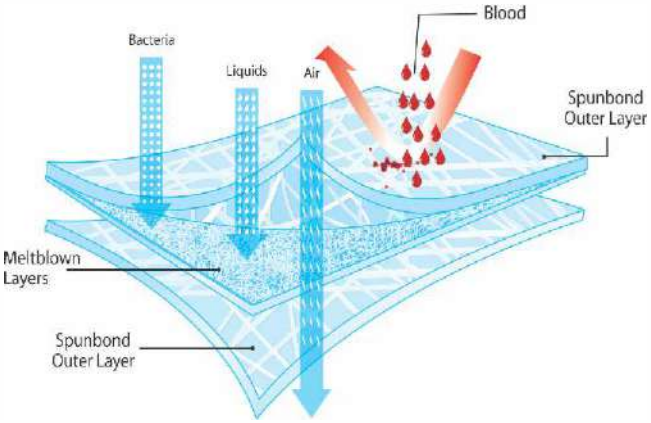

Application:- manufacturing of Drapes

BVB Fabric

BVB is a high tech fabric comprising of a thin micro porous breathable monolithic membrane sandwiched between two soft fabric layers. The outer layer is liquid repellant while the inner layer is soft and pliable. It has high vapour permeability while blocking liquids besides offering maximum protection against transmission of viruses and bacteria. The drapes offers extreme comfort during extended surgical procedures. BVB is recommended especially for use during surgical procedures being carried out on virus infected patients and is the perfect barrier against transmission of HIV, H1N1 and Avian Influenza viruses.

Application:- Manufacturing of Gown Level - IV

ARAS SMMMS Fabric

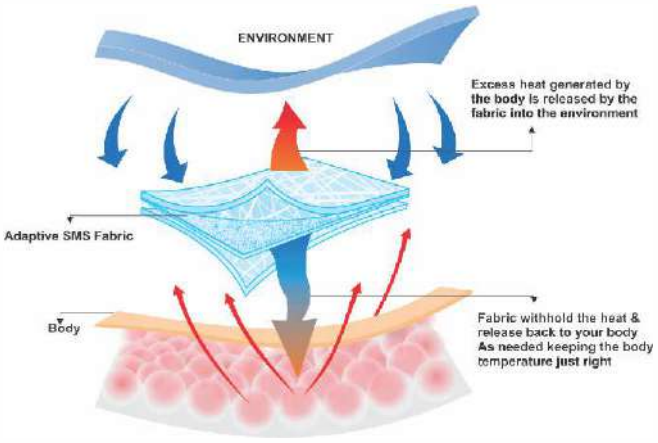

This high tech (ARAS) Alcohol repellent & anti static SMS fabric has high repellence protects against low surface tension such as blood, body fluids and alcohol. Best in class tensile, tear and burst strength and virtually lint free

Application:- Manufacturing of Gown

SMMMS Adaptive Fabric

Our soft SMS scrub suit fabric already feels great to the touch. It is made up of hydrofunctional polymer that captures and distributes moisture. This adds a special property to our fabric so that its behavior changes with the environment around it. VaporCool must be worn in direct contact with the wearers skin to properly regulate their body temperature. When hot, the fabric is breathable, allowing moisture to pass through resulting in a cooling effect. When cold, it holds in moisture acting as an insulating layer. It's an innovative product, with a very profound benefit – comfort!

Application:- Manufacturing of Scrub Suit

SURGICAL GOWN

Our surgical gowns are known for their excellent properties of flexibility, comfort and safety. Keeping in mind varied requirements of surgeons we offer surgical gowns in three different styles and various sizes, using a combination of various fabrics, each with distinctive properties as regards end use, protection and comfort.

We do not skimp on use of materials and in each size, the proportions of chest, shoulder, arms and waist are given generous allowances to allow comfort, freedom of movement and good fit. Each gown has a velcro neck closure for easy adjustment to any neck size while offering total seal against fluid splashes at the front due to gapless construction.

The outstanding protective feature of our surgical gowns is that all seams are ultrasonically welded for absolute protection and strength. Another feature is the use of low lint materials to reduce risk of contaminating open wounds or the atmosphere in the operation room. A third feature is that we use materials with inherent low flammability characteristics conforming to CPSC16CF part 1610 standards.

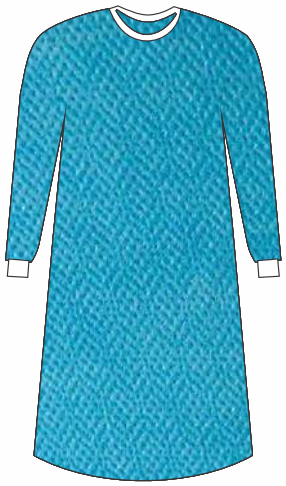

Surgical gowns carrying our brand conform to AAMI and EN13795 standards for surgical gowns.

Our Gown Range

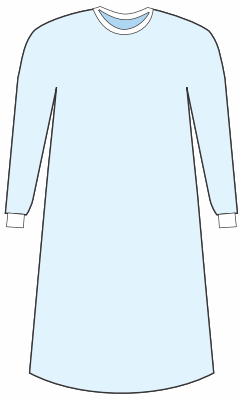

This type of surgical gown is made of four layer fabric for maximum protection against ingress of bacteria, virus and fluids. The outermost layers are liquid repellant spunbond fabric with the two inner layers comprised of meltblow layers. Extreme comfort, breathability, AAMI Level 2 protection with single layer and AAMI Level 3 protection with PE enforced fabrics are features of this superior gown that allows ease of use, comfort and full protection.
