PROMILINE / NEUTRALINE

NEEDLE FREE EXTENSION DEVICES

Closed system I.V. extention line especially designed for effective infection control during routine and critical care settings.

PROMILINE™ | NEUTRALINE™

PROMILINE™ GS-3250

- I.V. Extension line with positive fluid displacement
- Provided with needle-free female luer lock port at one end and male rotating luer lock port at other end.
- Positive pressure facilitates auto-flush/ forward flushing on syringe removal, prevents blood back flow and minimizes clotting risk.
- Clear polycarbonate body for easy visibility.
- Swabable needle-free silicone valve for safe access.
- Compatible with luer lock syringe & male luer lock connector fitment.
- Sterile, single use, individually blister packed.
